Flooding status in the Pittsburgh Seam - Monongahela, PA, Quadrangle

Legend:
- mine drainage
- water treatment plant
- shaft
- Pittsburgh coal

Flood status:
- not flooded or unknown
- active mine
- flooded or flooding

This mapping is a reasonable, but not exact, facsimile of the distribution of underground mining. Mine map data were compiled from a variety of original and secondary sources of varying accuracy. While the absolute accuracy of specific mine locations, mine outlines, and seam coal thickness may not easily be estimated, it may be considered to typically range from 50 to 100 meters. Mine features have been generalized, and changes in mine conditions may have occurred since mapping. Unlined coal blocks within mines were mapped only if their total area was greater than about 40 acres.
