Mining in the Pittsburgh Seam - Majorsville, WV-PA, Quadrangle

Legend:

- Coal: mining structure center
- Red area: coal block

Colored areas are underground mining indicated on U.S. Geological Survey 7.5 minute quadrangle maps. Colored areas are likely mining area including pits and surface mine. The database contains the coal blocks and the outlined areas are primarily veins.

Data from the U.S. Geological Survey, 7.5 minute quadrangle maps.

This mapping is a reasonable, but not exact, facsimile of the distribution of underground coal areas. The map outlines were compiled from a variety of original and secondary sources of varying accuracy. While the absolute accuracy of specific breaker locations, mine outlines, and unmined coal blocks may not always be exhibited, it may be considered to typically range from 90-100 percent. Some data have been generalized, and others have been omitted. Unmined coal blocks within mines were mapped only if their total area was greater than about 10 acres.
