Mining in the Pittsburgh Seam - Pittsburgh East, PA, Quadrangle

Legend:

- Mine drainage
- Pittsburgh structure center
- Hydrogeologic corner

Colored areas are underground mining indicated on the topographic maps. Non-colored areas are non-coal mining areas including plant and harbors, areas that the area boundary for indicated mines and the detailed outline are presently active.

This mapping is a reasonable, but not exact, facsimile of the distribution of underground mine areas. Mine map outlines were compiled from a variety of original and secondary sources of varying accuracy. While the absolute accuracy of specific barrier outlines, mine outlines, and unlined coal blocks may not necessarily be exhibited, it may be considered to typically range from 10 to 50-meters. Some features have been generalized. Unlined coal blocks within mines were mapped only if their total area was greater than about 40 acres.
