Mining in the Pittsburgh Seam - Steubenville East, WV-PA-OH, Quadrangle

Legend:

This mapping is a reasonable, but not exact, facsimile of the distribution of underground mine areas. Mine map outlines were compiled from a variety of original and secondary sources of varying accuracy. While the absolute accuracy of specific barrier locations, mine outlines, and unlined coal blocks may not exactly be reflected, it may be considered to generally range from 500 feet. Some features have been generalized. Unlined coal blocks within mines were mapped only if their total area was greater than about 50 acres.

Data used is derived from the U.S. Geological Survey's ground water and surface water maps. Map scale is 1:50,000. All topographic maps are derived from U.S. Geological Survey 1:24,000 topographic quad sheets.
