Mining in the Pittsburgh Seam - Tiltonsville, WV-OH, Quadrangle

Legend:
- Acid mine drainage
- Pittsburgh structure contour
- Pittsburgh coal trend
- Sloped areas
- Flooded area

This mapping is a reasonable, but not exact, facsimile of the distribution of underground mine areas. Mine map outlines were compiled from a variety of original and secondary sources of varying accuracy.

The accuracy of specific barrier locations, mine outlines, and unfilled coal blocks may not strictly be estimated, so they may be considered to typically range from 25-50 meters. Mine names have been generalized, and 100% coverage for each mine is not required. Unfilled coal blocks within mines were mapped only if their total area was greater than about 50 acres.

Data used is derived from the U.S. Geological Survey 1:12,500 topographic maps.
