Mine Outlines in the Pittsburgh Coal Study Area 1

(Revised March 2003)

The colored polygons represent mined areas, compiled from a variety of original and secondary sources. This mapping is a reasonable, but not exact, facsimile of the actual distribution of underground mined areas. The accuracy of the mapping is believed to be + 100 meters at this scale. Due to the relatively coarse reconnaissance scale of this map, it is inappropriate to enlarge and present these outlines at larger scales. Locations of blocks of unmined coal within the mines are not delineated.
